

# Ventura Systems Tools

**Tool:** First Installation Kit  
**Part number:** VB8632/VB8633  
**Application:** All door systems

## Description

The first installation kit can be used to power up the door system independently from the power supply of the vehicle. For example, when the cables in the vehicle are not yet installed. The first installation kit gives control to the door system and creates flexibility in adjusting and calibrating the door system. The door can be controlled with the 'Workshop' button located on the mechanism. The 'Reset Emergency' button located on the first installation kit gives the possibility to reset the emergency system.

Depending on the door system there are two different part numbers: VB8632 or VB8633. Consult [parts@venturasystems.com](mailto:parts@venturasystems.com) for advice on the correct part number to order.
