

technical training for door systems

1

Product knowledge & operation

Understand the system layout, key components and operating principles.

2

Installation & adjustment

Learn correct installation and adjustment procedures, critical settings and functional checks.

3

Maintenance & service

Develop your inspection and maintenance skills and learn to apply technical documentation.

4

Diagnostics & troubleshooting

Investigate faults step by step and use available diagnostic tools to identify possible causes.

5

Train the trainer

Prepare your trainers to share technical knowledge using practical explanations and training materials.

let's discuss your training needs

Designed for technical and maintenance teams at vehicle manufacturers and public transport operators. Each training programme is tailored to your organisation, with the content, group size, duration, language and location agreed to suit your team's specific needs.
